

Simply Scan VIN Decoder

The Simplyscan Mobile Vin Decoder App gives your automotive re-selling business the power to save money, save time and be more accurate when communicating with your staff or customers. The SIMPLE app on your phone or tablet is easy to use and allows each user to scan or enter an auto VIN (vehicle ID number) and automatically upload all the basic data of the automobile. After you add some more information of the vehicle, take some images, record the reconditioning needed and you are ready to email or text the data collected.

The App simplifies the process of data collection and streamlines the process of assembling that information. No more missing info from a text or confusion from multiple texts.

2006 FORD E-350 XLT

Price: \$0.00

Stock #: A10520

Simply AUCTION

Simply Auction is an ON LINE used automobile marketplace that provide registered dealers, brokers, wholesale and rental agencies with a complete vehicle remarketing solution.

Simply Auction was designed to be mobile and easy to use for buyers and sellers. You can display and sell your vehicles with ease and allows buyers to escape the regular fees that other sites charge. Reach out to hundreds of buyers with the click of a button with almost no cost to your company.

Simply Auction makes it SIMPLE... NO BUYER FEES and a 1 time a month seller fee. If you sell 25 cars a month you still pay the 1 fee not 25 fees, Is that SIMPLE enough for you.

Inventory Management System

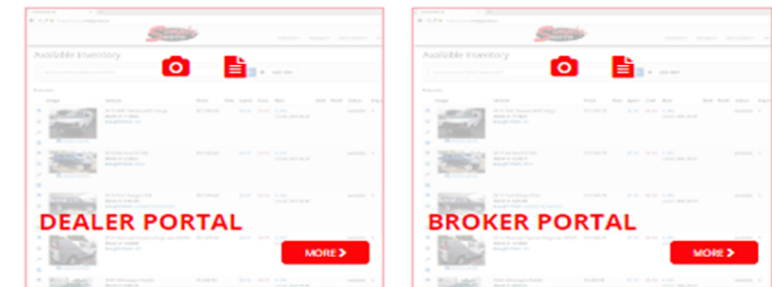

Used Auto Dealership Portal Developed by Dealers for Dealers

The AIMS Inventory Management System was created to streamline the used automobile inventory system. Many dealers found that using multiple systems that would not communicate with each other was inefficient. The time consuming process of multiple people entering inventory multiple times...is simply in-efficient. With the AIMS system the information is entered once and that is the last time the info needs to be entered anywhere within the organization.

As soon as the a purchased vehicle comes into the company, only one staff personal using the [SimplyScan Vin decode](#) adds the vehicle into the AIMS system. The vehicle is successfully added to the **front-end website** and the **back-end inventory are**. Then when it comes to the accounting, simply type in the Vin or stock number created at time of original input and add the purchase bill of sale and CarProof or ICBC. Make the CarProof live and it uploads to the front-end site to show transparency to all your buyers. When it comes time for you to sell your new unit simply create a bill of sale and all the info will be right there for you to use.

The easy and simple process will allows dealers better time management, lowers inventory costs and much more ease in documenting and selling the vehicle.

Our inventory management system can be configured as either **Dealer Portal** or **Broker Portal**. Please review the following section to learn the difference and their features.
